

Minerals from Conflict-Affected Areas

Carolina Moldings, Inc. supports ending the violence and human rights violations in the mining of certain minerals from a location described as the “Conflict Region”, which is situated in the eastern portion of the Democratic Republic of the Congo (DRC) and surrounding countries. As a result the U.S. Securities and Exchange Commission (“SEC”) adopted final rules to implement reporting and disclosure requirements related to “conflict minerals,” as directed by the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010. The rules require manufacturers who file certain reports with the SEC to disclose whether the products they manufacture or contract to manufacture contain “conflict minerals” that are “necessary to the functionality or production” of those products.

The definition of “conflict minerals” refers to gold, as well as tin, tantalum, and tungsten, the derivatives of cassiterite, columbite-tantalite, and wolframite, regardless of where they are sourced, processed or sold. The U.S. Secretary of State may designate other minerals in the future.

OUR COMMITMENT:

1. We will not knowingly procure specified metals that originate from facilities in the “Conflict Region” that are not certified as “conflict free”.
2. We will ensure compliance with these requirements, and ask our suppliers to undertake reasonable due diligence with their supply chains to assure that specified metals are being sourced only from:
 - Mines and smelters outside the “Conflict Region” or
 - Mines and smelters which have been certified by an independent third party as “conflict free” if sourced within the “Conflict Region”.

This due diligence includes having our suppliers provide documentation stating that raw materials used to produce material and or supplies for Carolina Moldings, Inc. be free of gold, tin, tantalum or tungsten, that originate from inside the “Conflict Region” or if they do originate from within the “Conflict Region”, that the mines or smelters be certified as “conflict free” by an independent third party. The aim is to ensure that only “conflict free” materials and components are used in products that we produce and sell.

If we discover the use of these minerals produced in facilities that are considered to be “non-conflict free”, in any material, parts or components we procure, we will take appropriate actions to transition product to be “conflict free”.
